

1 2 receiving a user selection of one of the MIB variables based on the electronic
2 document;

3 wherein the step of receiving the current value of the MIB variable from the MIB of
4 the network device includes the step of obtaining the MIB variable that is
5 identified in the user selection from the MIB object tree in the memory of the
6 network device.

1 5. The method of claim 1, further comprising the steps of:
2 receiving the HTTP request message to obtain the current value of the MIB variable
3 at an HTTP-SNMP interface;
4 creating an SNMP query that requests a current value of the MIB variable based on
5 the HTTP request message; and
6 communicating the SNMP query to an SNMP daemon of the network device.

1 6. The method of claim 1, further comprising the steps of:
2 communicating the current value of the MIB variable to the HTTP-SNMP interface;
3 creating and storing an HTML page that contains the current value of the MIB
4 variable; and
5 sending the HTML page to an HTML daemon of the network device.

1 7. The method of claim 1, further comprising the step of creating and storing an
2 executable software element in association with the Web browser, wherein the executable
3 software element is configured for packaging an SNMP query into the request from the Web
4 browser.

1 9. The method of claim 8, further comprising the step of sending the SNMP query to an
2 SNMP daemon of the network device.

[illegible]

Sub B 7

12. The network device of claim 11, wherein the instructions further cause the processor to carry out the steps of:

- creating and storing a MIB object tree in a memory of the network device;
- creating an electronic document that contains a representation of one or more MIB variables of the MIB object tree;
- communicating the electronic document to the Web browser.

13. The network device of claim 11, wherein the step of receiving the current value of the MIB variable from the MIB of the network device includes the steps of creating and storing a MIB object tree in a memory of the network device; obtaining the MIB variable from the MIB object tree in the memory of the network device.

14. The network device of claim 11, wherein the instructions further cause the processor to carry out the steps of:

- creating and storing a MIB object tree in a memory of the network device;
- creating an electronic document that contains a representation of one or more MIB variables of the MIB object tree;
- receiving a user selection of one of the MIB variables based on the electronic document;

wherein the step of receiving the current value of the MIB variable from the MIB of the network device includes the step of obtaining the MIB variable that is identified in the user selection from the MIB object tree in the memory of the network device.

15. The network device of claim 11, further comprising an HTTP-SNMP interface which, when executed by the processor, causes the processor to carry out the steps of:

4
5
6
7

receiving the HTTP request message to obtain the current value of the MIB variable at an HTTP-SNMP interface;

creating an SNMP query that requests a current value of the MIB variable based on the HTTP request message; and

communicating the SNMP query to an SNMP daemon of the network device.

1 16. The network device of claim 11, further comprising the steps of:
2 communicating the current value of the MIB variable to the HTTP-SNMP interface;
3 creating and storing an HTML page that contains the current value of the MIB
4 variable; and
5 sending the HTML page to the HTML daemon.

[illegible]

1 17. A computer-readable medium carrying one or more sequences of one or more
2 instructions for obtaining a current value of a Management Information Base (MIB) variable
3 stored in a network device in a network, the one or more sequences of one or more
4 instructions including instructions which, when executed by one or more processors, cause
5 the one or more processors to perform the steps of:
6 receiving a connection of a Web browser to the network device;
7 receiving an HTTP request message from the browser to obtain the current value of
8 the MIB variable;
9 receiving the current value of the MIB variable from the MIB of the network device;
10 and
11 communicating the current value of the MIB variable to the browser using an HTTP
12 reply message.

1 18. The computer-readable medium as recited in claim 17, wherein the instructions
2 further cause the processor to carry out the steps of:
3 creating and storing a MIB object tree;

4 creating an electronic document that contains a representation of one or more MIB
5 variables of the MIB object tree;
6 communicating the electronic document to the Web browser.

1 19. The computer-readable medium as recited in claim 17, wherein receiving the current
2 value of the MIB variable from the MIB of the network device includes the steps of creating
3 and storing a MIB object tree in a memory of the network device; obtaining the MIB variable
4 from the MIB object tree in the memory of the network device.

1 20. The computer-readable medium as recited in claim 17, wherein the instructions
2 further cause the processor to carry out the steps of:
3 creating and storing a MIB object tree in a memory of the network device;
4 creating an electronic document that contains a representation of one or more MIB
5 variables of the MIB object tree;
6 receiving a user selection of one of the MIB variables based on the electronic
7 document;
8 wherein receiving the current value of the MIB variable from the MIB of the network
9 device includes the step of obtaining the MIB variable that is identified in the
10 user selection from the MIB object tree in the memory of the network device.

1 21. The computer-readable medium as recited in claim 17, wherein the instructions
2 further cause the processor to carry out the steps of:
3 receiving the HTTP request message to obtain the current value of the MIB variable
4 at an HTTP-SNMP interface;
5 creating an SNMP query that requests a current value of the MIB variable based on
6 the HTTP request message; and
7 communicating the SNMP query to an SNMP daemon of the network device.

Sub D'7

1 22. The computer-readable medium as recited in claim 17, wherein the instructions
2 further cause the processor to carry out the steps of:
3 communicating the current value of the MIB variable to the HTTP-SNMP interface;
4 creating and storing an HTML page that contains the current value of the MIB
5 variable; and
6 sending the HTML page to an HTML daemon of the network device.

Sub B5

1 23. An HTTP browser program including a plug-in executable software element
2 configured for obtaining a current value of a Management Information Base (MIB) variable
3 stored in a network device in a network and which, when executed by a processor that
4 executes the browser, causes the processor to carry out the steps of:
5 connecting the browser to the network device;
6 communicating an HTTP request message from the browser to the network device,
7 wherein the HTTP request message comprises an SNMP query that requests a
8 current value of the MIB variable;
9 receiving the current value of the MIB variable from the MIB of the network device
10 in an HTTP reply message; and
11 displaying the current value of the MIB variable using the browser.

1 24. An applet executable in a browser program and configured for obtaining a current
2 value of a Management Information Base (MIB) variable stored in a network device in a
3 network and which, when executed by the browser, causes the browser to carry out the steps
4 of:
5 connecting the browser to the network device;
6 communicating an HTTP request message from the browser to the network device,
7 wherein the HTTP request message comprises an SNMP query that requests a
8 current value of the MIB variable;

SUBS

- 9 receiving the current value of the MIB variable from the MIB of the network device
- 10 in an HTTP reply message; and
- displaying the current value of the MIB variable using the browser.
